OUTPATIENT REHABILITATION

Are you or
is a loved one
beginning to
have **trouble**
driving safely?

SYMPTOMS

- Getting lost on familiar routes
- Slowed reaction time – “near misses”
- Increased errors in turning, changing lanes, backing up, signal light or intersection behaviors, parking, pulling out, judging distances
- Emotional distress – anger or frustration
- Multiple fender benders or scrapes
- Speed not matching situation – too slow or fast
- Reliance on a co-pilot for directions and info
- Warnings or tickets from police
- Confusing the brake and gas pedals
- Going the wrong way
- Drifting over
- Not noticing signs, pedestrians, signals
- Running over curbs or “bumping” things
